CONSTRUCTION

1 Construction Services

RIHA COMPANY offers a wide range of civil and structural engineering construction ranging from steel structures erections, reinforced concrete structures and road construction in gravel, paving blocks, concrete, bitumen roads and associated drainage structures.

We structure our construction designs, installations and maintenance procedures to the greatest extent possible, to improve erosion and sediment controls, ensure soil stabilization to drive down the effect of water pollution and preserve natural vegetation such as trees and flowers to the extent where possible we uproot and replant. Moreover, with heavy equipment solely relying on diesel, remembering to shut down machinery during breaks enables us to not only conserve energy but also to reduce the amount of harmful emissions we pump into the atmosphere.
